

Candidate Screening Report

Backend Engineer

Generated 2026-08-04 12:23 UTC by founder@company.com

This is an automated screening aid, not a hiring decision. It is based solely on information extracted from the submitted resume and should be reviewed by a human recruiter alongside the full application. Do not use it as the sole basis for rejecting or advancing a candidate.

Role Requirements

Requirement	Detail
Required skills	Python
Preferred skills	None specified
Minimum experience	Not specified
Education	Not specified

Screening Overview

Metric	Value
Candidates screened	1
Average match score	1.00
Strong Match	1

Executive Summary

A candidate pool of one applicant was evaluated for the Backend Engineer position. The screened candidate achieved a perfect match score of 1.00, demonstrating complete alignment with the required Python skill set and no missing skills. Based on this screening, the entire candidate pool has been categorized with a Strong Match recommendation.

Match scores are computed arithmetically from skills, experience, and education against the stated requirements. They reflect resume-to-requirements fit only.

Candidate Ranking

Rank	Candidate	Score	Recommendation	Missing required skills
1	Jane Doe	1.00	Strong Match	None

#1 — Jane Doe

Field	Value
Email	jane.doe@example.com
Match score	1.00
Recommendation	Strong Match
Resume file	jane_doe_resume.pdf

Why this recommendation

Match score 1.00 meets the strong-recommend threshold of 0.80, and no required skills are missing.

Summary

The candidate is an ideal match for the Backend Engineer position, demonstrating extensive professional experience in backend development and full proficiency in the required Python skill set.

Matched skills

- Python

Strengths

- Demonstrated track record as a Senior Backend Engineer building and scaling REST APIs and microservices.
- Extensive technical stack expertise including Python, Django, PostgreSQL, Docker, Kubernetes, and AWS.
